

Facts Regarding Our Proprietary Technology

A Vision for Ethical Energy Stewardship

*Our proprietary revolutionary technology provides a transformative alternative to conventional power sources. Rooted in quantum physics, it reinterprets and extends **Faraday's Law**, transitioning from a traditional input-driven energy model to an output-focused system. By integrating principles of over-unity and AI-powered energy management, our system enhances energy conversion efficiency beyond conventional limits, enabling higher power generation with reduced resource input and optimised energy distribution in real-time.*

*We are fully aligned with the **United Nations Sustainable Development Goals (SDGs)**, the **Microgrid Systems Act**, and international law standards, ensuring ethical, sustainable, and globally compliant operations. In the United States, our licensed system operates up to 500 kW (scalable for larger applications). As a decentralised distributor network, we operate independently of traditional transmission grids, making our infrastructure climate-resilient, anti-sabotage, and resistant to terrorist attacks. AI integration allows us to monitor, control, and optimise energy flow, detect anomalies, and ensure reliability and stability across microgrids and hybrid energy systems.*

*Our mission is larger than energy. We aim to heal the universe and act as responsible stewards of the Earth. Unlike other technologies that exploit energy for profit or manipulation, our approach is guided by wisdom-driven innovation, which we call the **"Wisdom Manipulation of Technology."** Every design decision, operational protocol, and safety measure is guided by ethical principles to create sustainable, safe, and beneficial outcomes for humanity and the planet.*

It is crucial to note that our system is not infinite or free energy. Claims of totally independent perpetual or self-powered operation are at this moment in time unavailable and sometimes can be associated with unverified copycat technologies. Our system, formally released in 2026 through RPG as the worldwide distributor, is scientifically auditable, led by a senior scientist who is the sole global patent holder, and supported by expert vendors, ensuring credibility, safety, and technical rigor in every aspect.

Technical and Marketable Foundations

Our system is an electromagnetic converter (PMG/alternator) producing electricity through relative motion and magnetic flux in accordance with Faraday's Law:

The magnet is not the fuel. The generator in our system functions as an electromagnetic converter, meaning it transforms mechanical motion into electrical energy based on Faraday's Law of Induction. In simple terms, it does not produce energy from nothing—it converts energy from one form (motion) into another (electricity).

Without over-unity principles, the generator operates like any conventional system: the output energy is always less than or equal to the input energy due to unavoidable losses (friction, heat, resistance, etc.). It cannot "create" energy independently—motion or input energy is always required.

When over-unity principles are applied in our proprietary design, the system is engineered to enhance the efficiency of energy conversion beyond conventional limits. This does not violate the laws of physics; rather, it optimises the way energy is captured, managed, and converted, reducing losses and allowing higher usable output per unit of input.

In short:

Without over-unity: The generator converts motion to electricity like a traditional system, respecting the energy balance.

With over-unity: The system is optimised to capture and convert energy more efficiently, producing more usable electricity from the same input, while still being scientifically verifiable and auditable.

We provide containerised, AI-integrated power modules that include:

- PMG/alternator with control, regulation, and protections.*
- Integration with microgrid/off-grid systems.*
- Flexible architecture: motor-generator or VFD-controlled motor + alternator.*
- Climate-resilient, anti-sabotage, and anti-terrorism design.*
- AI-driven energy management for predictive maintenance, load optimization, and anomaly detection.*
- Benefits: modularity, rapid deployment, N+1 redundancy, planned maintenance, and controllable OPEX.*
- This design is bankable and defensible because it aligns with market expectations: modular containerized units, verifiable performance, AI-driven optimisation, and remote monitoring.*
- Operational Integrity and Evidence-Based Performance.*

To maintain credibility during due diligence:

- Exaggerated claims (“perpetual,” “self-powered,” “fuel-free”) are omitted unless fully auditable with certified instrumentation and complete energy balance.*
- Performance is documented via load bank testing, 72–168 hour continuous trials, raw logs, calibration records, and signed reports.*
- Savings and efficiency are quantified using internal TCO/LCOE with transparent assumptions. Baselines (30–90 days) and KPIs—including useful kWh, stability, availability, and CO₂ reduction—are fully tracked and auditable.*
- Technical and Financial Readiness (Under NDA/NCA).*

Full technical and financial details—including generator specifications, efficiency curves, THD, protections, parallel operation, CAPEX, OPEX, and

supply chain logistics—are contained in our Business Development Plan and Prospectus. These details are disclosed only under NDA/NCA, with LOI and PO through formal B2B transactions, with payment processed via DBS Bank, Telegraphic Transfer, or approved financial methods. This ensures intellectual property protection and commercial integrity.

Summary: A Global Game-Changer

Our proprietary technology is more than a power solution—it is an ethical, auditable, and transformative global energy platform. We operate independently from traditional transmission grids, delivering climate-resilient, anti-sabotage, and anti-terrorism electricity. With AI integration, our system ensures smart, optimised, and secure energy management across microgrids and hybrid networks.

We are guided by wisdom, not manipulation, creating technology that serves humanity and the planet sustainably.

Compliant with international standards and scientific rigor, our solution is fully auditable and bankable.
